

ACM : Awesome, —
Convenient, Magical

Solutions designed for curtain control are crucial because they guarantee user's privacy and health. Aiming to offer devices that perfect your home space, TIS introduces the Zigbee-powered ACM Shutter Module. This module helps with smart curtain control by perfectly replacing your old switches.

It also upgrades roller blind motors with no hassle. You can add it to your living room to bring more convenience to your lifestyle. It's ok if you're tired and can't get up to open the curtains. The ACM switch takes care of it and lets some fresh air change your mood.

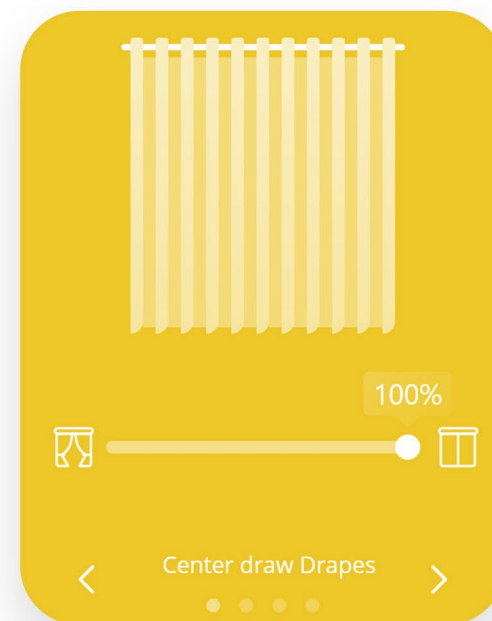

Even if you're away, you can adjust your home's shutters and curtains via the internet. The Zigbee 3.0 gateway is compatible with both the iOS and Android versions of the TIS App. In other words, you will be able to open or close your curtains from any location around the globe. Do you think your plants might need a little sunshine? Open the shutters using just your smartphone.

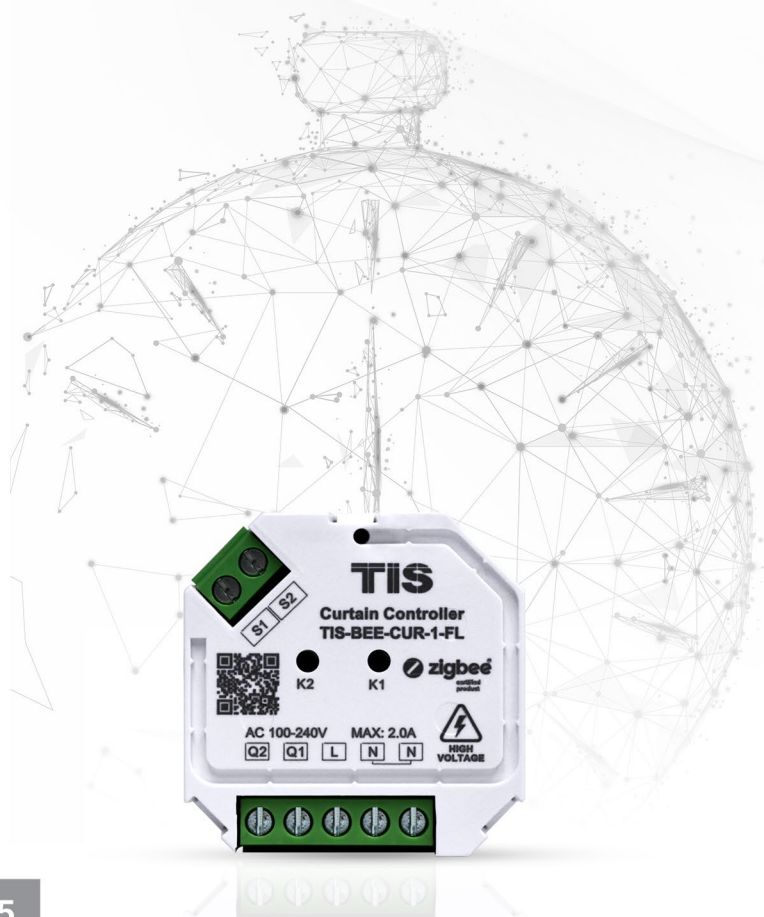

In addition to remote control, you can always enjoy hands-free voice control. This feature is ideal for the elderly, as it gives them control and helps them stay up-to-date with the latest technology. Ask Alexa to close the blinds when it's getting dark and you need your privacy.

The timer functionality of this switch also allows you to automatically open or close shutters at a specific time. You can create a fun good-morning starter pack by setting your curtains to open as your alarm goes off.

Our number one purpose is to make sure that our technology brings you comfort and convenience. That's why we designed the ACM Shutter Switch to help you to have the time of your life!
