It's time for smart living

TRANSFORM YOUR HOME

In order to advance our customers' experience of the Internet of Things (IoT), TIS presents a product that incorporates advanced technology with functional design: our ACM Controllers with many useful automation options.

This WIFI series includes three main products and can be used to control lights (on/off/dimming), shutters, gates, and more. Available in small sizes, they easily fit wherever you need them without disturbing your personal design.

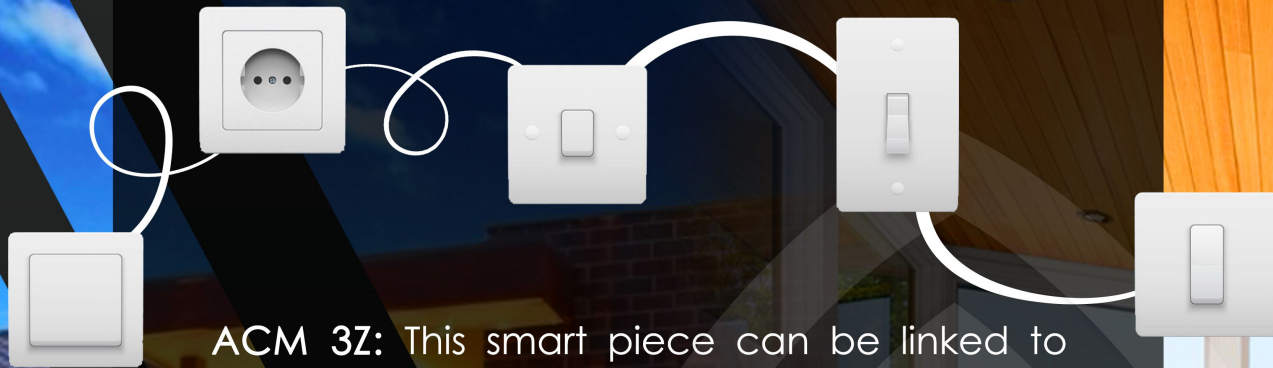

Below is a brief review of each option:

ACM Relays : This package consists of 2 relays and is used to control lighting and motors. ACM relays enable you to transform your home without removing old switches. All you have to do is add these relays to old switches, so if you want to keep your classic indoor theme while enjoying new technology, this solution is perfect for you. In addition, everything is faster with ACM relays; your car gate opens right on your arrival, your key to convenience is right on your finger, and your home can welcome you with an open door at the touch of a button.

ACM Dimmer : This solution is the most affordable way to update push-button lights without the need to remove old switches. Just add an ACM Dimmer to any old push-button switch to get dimmer capability. Once you add the ACM Dimmer, you simply press and hold the switch to reach your level of preferred light. Need a little lighter living room for reading in the evening reading? This dimmer will take care of it.

ACM 3Z: This smart piece can be linked to sensors that detect water leakage, smoke, and more so that you get notified whenever anything goes wrong regardless of where you are. Since you're alerted at once, you can take action immediately. No more parquet swelling or laminate damage, and you can always save your furniture.

These devices have built-in WIFI and automatically connect directly to any TIS server. This means you can control your home even when you are away. Also, you can use the timer to set ACM modules to perform specific commands at specific times. For example, if you like a hot bath every morning before you leave for work, you can set the ACM module to prepare the bathtub for you at 7 every morning.

They also provide an exact record of your consumption on a monthly and annual basis. This helps give you a clear sense of your energy consumption so that you can make usage adjustments if necessary.

TIS is your smart home company for the most functional electrical devices that bring you the latest technology designed to blend in to any home.
