CONTROL EVERYTHING
TIS  **BEE**

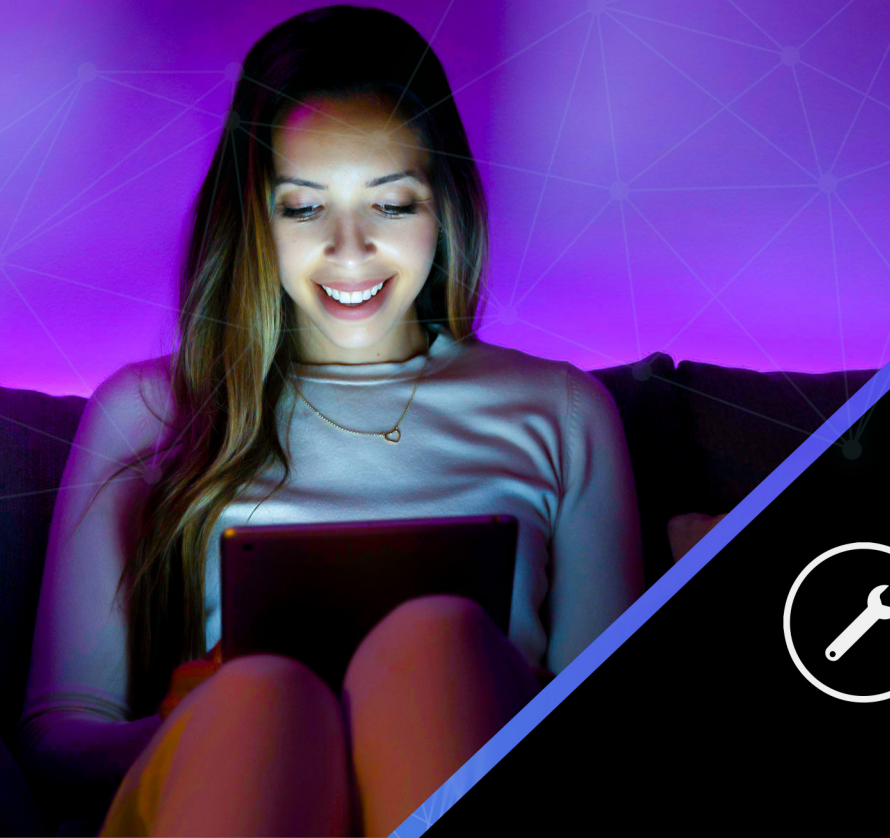

Although today's smart bulbs are brighter and easier to control, choosing the right one for your environment is still challenging. To help you decide, we offer the smart Light Bulb powered by the Zigbee 3.0 protocol. It is a functional solution with many capabilities that eases light creation and adjustment.

It is designed to offer quality white color and the RGBW color spectrum. So, whether you wish to create a modern look with spotlights or a vintage atmosphere in your study room, all is possible with this smart bulb.

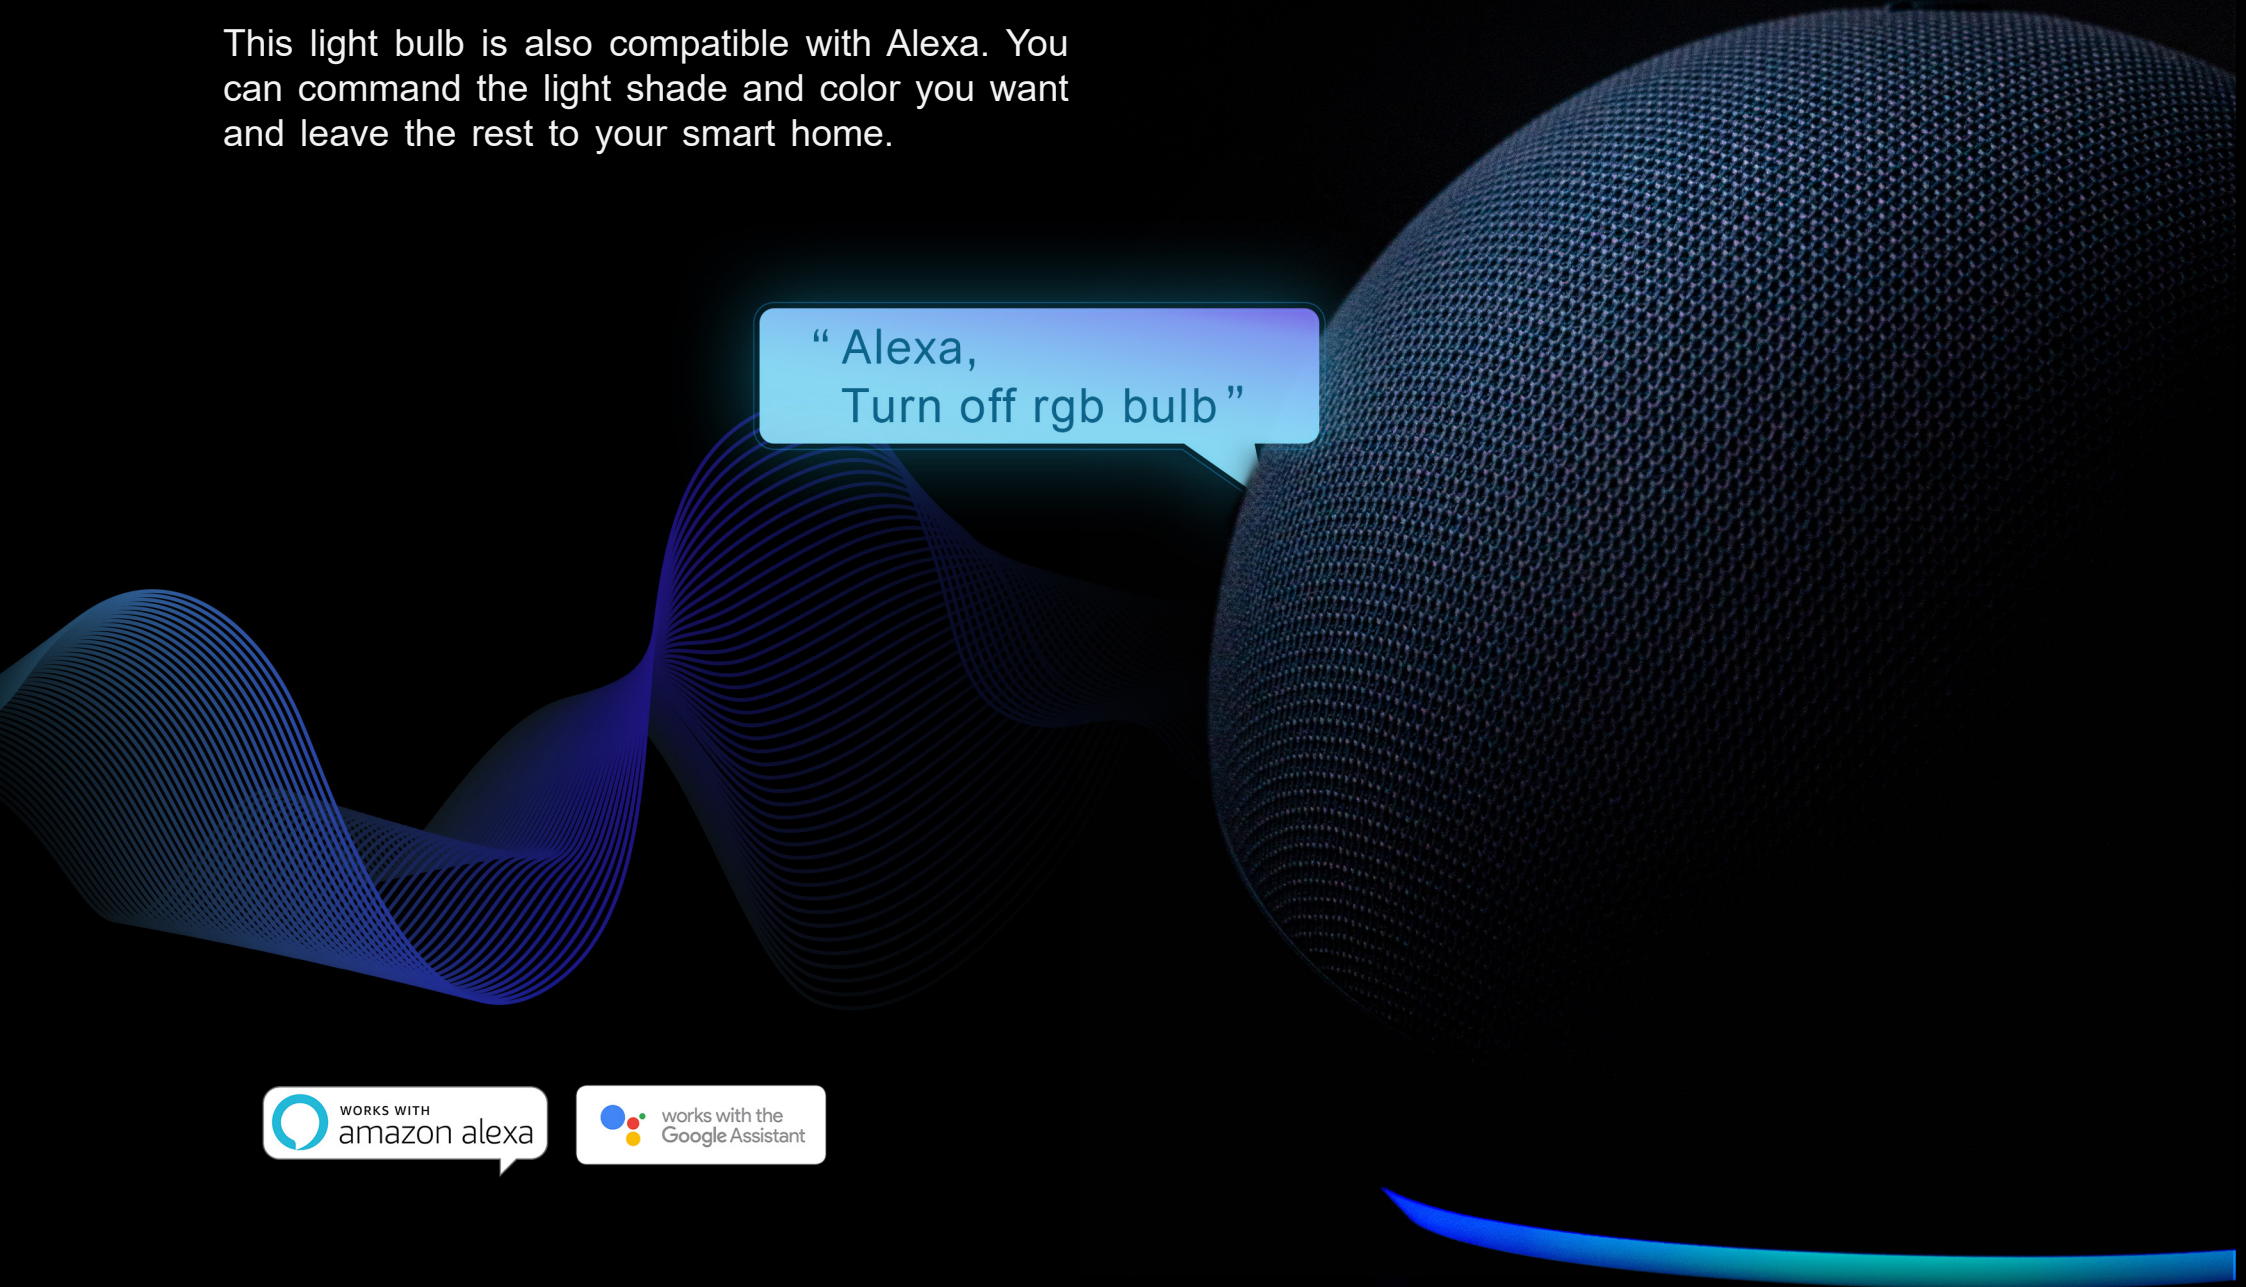

No cabling is required. Just plug this bulb in anywhere, and let it brighten your world while saving you money on energy costs. It can be integrated with other lighting devices or used as a main source of lighting.

All you need to control this light bulb is your smartphone or tablet. Turn off the living room lamp as you leave for work with just a swipe. Or, set the bedroom light to turn off automatically before you go to bed. This light bulb's actions can be scheduled for more convenience and efficiency.

This light bulb is also compatible with Alexa. You can command the light shade and color you want and leave the rest to your smart home.

“Alexa,
Turn off rgb bulb”

And, it is not solely about lighting; this awesome bulb brings added value by becoming an inseparable part of all sorts of fun and entertainment in your home.

We are committed to bringing you the best because we believe you deserve the best.
