It's time for smart living

Uniquely Designed for Foremost Function

Looking for a simple device with many capabilities? You are standing in the right spot. TIS smart home Company offers one of the simplest and most user friendly solutions with many controlling options. Air Socket is one of the wireless devices that is the most functional due to its portability.

You can install this solution wherever you want without any difficulty. All you have to do is to plug it where you need it. The rest is done using a fingertip.

This socket which is available in white has a nice design and it fits around your interior design easily.

There are two kinds of Air Sockets; Relay and Dimmer.

The first type is used for controlling lights ON/OFF and any other electrical devices. If you are a football fan but because of fatigue you end up sleeping in the middle of the second half, you can just set the TV to be automatically turned off at a specific time. This small but highly functional device is a useful assistant when you are short of time to handle everything by yourself. If your friends tell you that they are coming to yours sooner than expected, Air Relay Socket can help turning on the electrical heater to warm up the room before your guests arrive. Also, if you are in a rush to leave the house and later you remember you might not have turned off the iron, you can easily check it out using smart phone and turn it off with only a touch.

Air Sockets can be a great gift to forgetful friends, don't you think?

Air Dimmer Socket is configurable with any kind of lamp and it produces quality light levels in every spot you want. You might want to dim your child's reading lamp at nights so that it acts like a night light. Also, you can plug this very socket somewhere else whenever you want. Do you like the bathroom to be dimmed? How about the stair area to attic? There is no limitation; Air Dimmer Socket is portable and very convenient to work with.

Both kinds are equipped with an inbuilt WIFI module which makes them automatically connected to internet. This feature enables controlling remotely. For example, when you are returning from a long day at work, nothing is more pleasant than a fine tea on a comfortable sofa. Just turn on the tea maker and when you get home, it is ready.

These sockets let you know how much energy is consumed per day/month/year and that is one important data you should have if you care about the planet and your pocket.

Air Sockets are also configurable with Amazon virtual assistant, Alexa. This enables voice commands if needed. In case of illness or fatigue, or in case your cellphone is charging in another room, you do not have to get up to turn on dishwasher or washing machine. Do not move, just say what you like to be done.

TIS smart home group tries to combine state-of-the-art technology with high performance in order to present significant solutions that not only acquire a trend-setting look, but deliver the most beneficial services in the modern world.
