

# SMOKE

DETECTOR

This handy little device is not only compatible with Zigbee-enabled hubs, but it can also make your standard smoke detector a part of your smart home automation system without any hassle that keeps an ear out for any smoke or fire alarm system to go off and then transmits that event to your hub for real-time notification. It also comes equipped with advanced algorithms to reduce the chances of false alarms.

But don't let its dimensions fool you because it has pretty much everything you'd want in a Zigbee-enabled smoke detector. To begin with, the alarm offers compatibility with Homey, Ok Google, and SmartThings.

It's easy to install and offers the convenience of smartphone alerts when you're away from home. There's also an audio alarm with an 85dB output and a battery life of 5 years. In short, it's everything you'd want in a smart smoke alarm.

**5 YEAR** **85dB**

Receive real-time notification to your smartphone or other devices anywhere around the world. To enhance its function, simply integrate it with other TIS smart solutions and create safety preset scenarios. In other words, you can define a scenario in which AC turns off immediately once smoke is detected in the room to minimize the risk of fire spread.

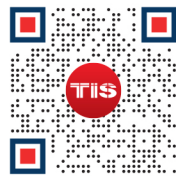

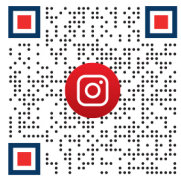

All you need is a Zigbee 3.0 gateway to create an advanced safety network in your property. Mount it in any space you want and enjoy a safe and sound life experience with smart tech.
