

VENERA
ZIGBEE
SWITCH

OUTPERFORM
YOUR
OWN
NEEDS

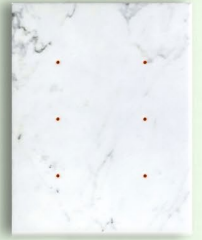

Not all available smart solutions perfectly fit your lifestyle. TIS Control Ltd. is committed to launching products that create both utility and business value, and the Zigbee-powered Venera Switch is certainly one of these products.

There are many reasons to get this beautiful wall switch. First and foremost, this switch makes every smart process so smooth that it feels like your home is like close friend who knows you very well. It helps you navigate lights, curtains, shutters, moods, and more with no inconveniences.

Second, this panel is super easy to operate. It perfectly fills the place of traditional light switches and pairs with your Zigbee hub so that you can brighten a room however you want from wherever you are. So, even when the whole family comes around and you are hosting many kids running around with pets, you can still save some energy without moving! Use your smartphone to keep the lights you don't need turned off.

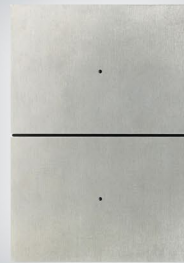

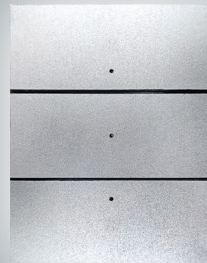

Plus, Zigbee users no longer have to switch lights on and off every time they enter a room. The Venera switch does that for them. The only thing they need to do is to integrate this panel with other smart devices in the protocol.

Another feature that makes Venera a must-have is its timer functionality. The next time you're going to bed, you don't need to be worried about the garden lights, as they will automatically go off at the previously set time.

Speaking of timers, do you have a yoga ritual? Why not define an atmospheric mood totally in harmony with your yoga sessions? Set the lights, play some music, pull aside the curtains, and enjoy some yoga vibes.

Venera is with always with you – not just in the moments you have for yourself, but also in those you share with your family. Whether you are watching a movie with your partner, reading a book to your child, or even holding a Zoom meeting with your grandparents, this Zigbee-powered switch helps to tune the ambiance.

A photograph of a wall switch in a room with blinds. The blinds are partially open, casting horizontal light and shadow stripes across the wall. The wall switch is a small, rectangular, light-colored device mounted on the wall. The overall lighting is warm and golden.

Mount this wall switch anywhere you think it creates more gorgeous views. This product's beautiful finishes and backlit LED icons add just the right level of elegance and prestige to your Zigbee-styled house.

Venera is designed with premiere capabilities for you to explore new horizons. Install it today, and start your intelligent home adventure!
