TIS SECURITY MODULE

TIS[®]
CONTROL EVERYTHING

*Name of a DreamWorks™ Animation film produced in 2012

What if every time you came home, you could rest assured that you're just a fingertip away from arming sensors all over your residential area? It's true.

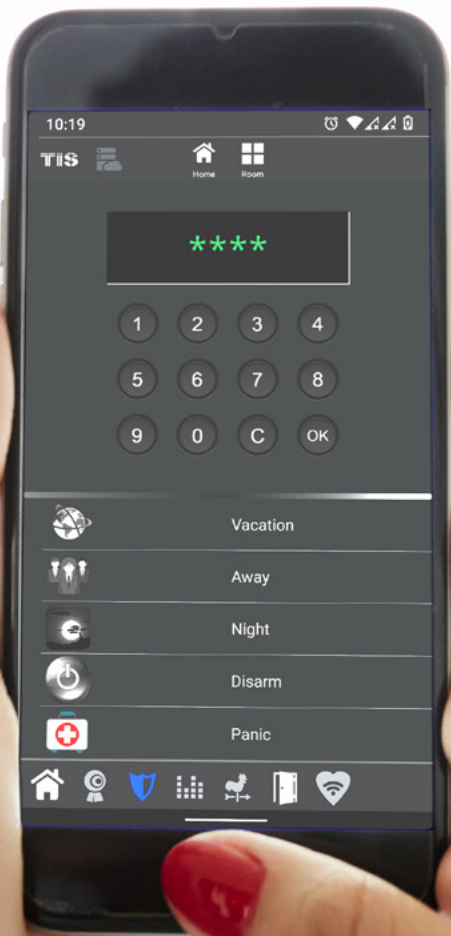

The TIS Smart Home Company has designed the Security Module, a BUS solution that supports all TIS motion sensors and digital inputs.

This Security Module is capable of covering more than 3000 BUS inputs divided into 8 areas. These inputs can be configured to be active for a specific duration.

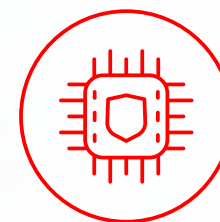

For example, you might want to have the smoke detector sensor enabled 24/7, while you only want the back door sensor to be active when you are away.

You can arm/disarm your security system in different modes, including vacation, away, day, or night. It's your call. Equipped with a built-in clock, this module can also be set to automatically arm/disarm these modes.

You can set your company's TIS Security Module to be disarmed at 8 a.m. every morning and to be armed at 7 p.m. every weekday evening. Moreover, the vacation mode can be automatically activated on the weekends.

The logics of this device are so smart that automatic disarming is not performed when it is set on Away/Vacation modes.

This solution upgrades the security system of your building significantly. Entry and exit delays, an alarm reset timer, and a duress password are several of this security device's important options. For example, if the system recognizes an abnormally long delay between entering the home and disarming the system, it is identified as trespassing, and the alarm is triggered.

In addition, this module can be a very effective part of your automation project. To understand it better, imagine this: if the system recognizes that trespassing has occurred, all the lights are turned on, the burglary alarm is enabled, and an automatic call is sent to the nearest police station. Also, if the fire sensor detects anything, all the AC and fan systems are stopped immediately so that the fire is not spread.

Trust the TIS Security Module. Modify your safety, and let it enhance the quality of your life.
