

PIR SENSOR

Like the Third Eye in Your House

Motion sensors detect movement and allow you to control the security of your property and take action in the case of suspicious movements.

The newly-fashioned PIR Sensor introduced by TIS Control Ltd. works with the Zigbee 3.0 protocol and comes with many features in addition to the basic function of motion detection.

This sensor is capable of sending instant alert notifications to your phone, but to know exactly what's going on in your home, you just need to integrate this sensor with other TIS solutions to obtain a complete view of the movement throughout your home as well.

- You can also link this sensor to your smart switch and have the lights automatically turn on as you approach a room.
  Our PIR sensor can be mounted anywhere you wish.

- The very simple mounting setup makes this device ideal for any location where motion detection is a priority.

In addition, it perfectly joins the preset scenes of your smart automation system, so if you want the AC to turn off when you leave the house, this sensor can be connected to the goodbye mode and help carry out the whole process more smoothly.

Plus, no extra cables are required. Simply use the 3M adhesive tape to mount it. It is battery-equipped and functional even if the power is out.

This motion sensor is quite handy and linkable to many types of solutions using the Zigbee gateway. It offers accurate movement detection in real time.

Trust TIS, and let the PIR Sensor protect you from property damage and more.
