

**TIS**  
CONTROL EVERYTHING

**Distributor box**  
**More Organized than Ever.**

Even in smart houses, the wires and equipment are usually kept in a dark cupboard or down in the basement. The importance of electrical boxes is somehow neglected in automation projects, although it is critical for the safety and quality performance of solutions. Along with many smart products, the TIS Automation Group has also designed a unique Distribution Box for better cable management and neater module organization.

This elegantly enclosed box houses various circuit breakers and other electrical components that maintain the power supply in your home. It also protects the electrical wiring of your home from short circuits or electrical surges that can eventually lead to power failure.

There are several reasons why you need a TIS smart electrical distribution box in your building. Firstly, with its glass door and nice case, it is just so chic that it can easily become part of your home's interior design. Secondly, it is portable, easy-to-install, and user friendly, so anyone can work with it. The TIS DB Box features modular rails and magnetic fixings for easier mounting and organization.

Finally, it helps mitigate against the occurrence of power failures that are sometimes an indicator of issues with your electrical distribution board. With the TIS DB box, you can easily avoid frequent electrical wiring issues or power trips and failures. Even if repair is needed, technicians can resolve the problem easier, as all cables are labeled in the TIS smart Distribution Board.

**We are here to help you stay safe while enjoying the trendy technology of TIS.**
